

Technical Data

Basis: Water

Physical condition : Granular liquid with high viscosity.

Colour: Orange - brown

Neutral PH

Fireproof

Miracle Seal seals leaks effectively and is a permanent solution whilst remaining in the system. It contains lubrication and anti-corrosion additives and is used for sealing leaks in Domestic, Commercial, Industrial and Automotive heating systems.

Miracle Seal is developed to make fast emergency repairs to leaking radiators and cooling systems. In case of minor leaks, the repair can be permanent. The soft particles do not clog the radiator and do not influence the action of the mechanical parts of the heating and cooling systems.

Miracle Seal can be used in all types of radiators (metal and plastic) and is compatible with all types of water-based coolants.

Applications Domestic / Commercial / Industrial:

For sealing leaks in heating, underfloor heating and solar panel systems.

Instructions for use: Miracle Seal is for professional use only. For systems over 5 years old it is recommended to flush out the system. It is preferable to be added to the flow pipe leaving the heating system. Shake the bottle of Miracle Seal vigorously for 30 seconds and pour into the system. Due to the variants in property size the amount of product required varies between 1 - 6 bottles. As Miracle Seal is a very concentrated formula only one bottle at a time should be added and then allowed to circulate for 30 minutes before adding the next bottle. For further application instructions please call our helpline on 028 3083 4892.

Packaging: 250ml Plastic Bottle.
